

Steven Anderson

Software Engineer | New York, NY | saanderson1987@gmail.com | 804-347-1957

PROJECTS

Quarry (React, Redux, Rails, PostgreSQL) ⇒ [live](#) | [github](#)

A full-stack, single page app inspired by Quora

- Implemented a dynamic front-end search of posted questions that displays and updates as the user input changes.
- Strengthened user authentication by incorporating BCrypt to create secure passwords.
- Leveraged inverse relationship associations in ActiveRecord database to tag questions with topics.

Tetris (JavaScript, jQuery, HTML, CSS) ⇒ [live](#) | [github](#)

A remake of the classic 80's arcade game

- Designed a grid using HTML and CSS and used jQuery and an asynchronous function to spawn falling pieces.
- Created just a few simple but powerful functions that take into account all possible piece barriers and stopping points.
- Utilized object-oriented programming to create piece objects that inherit common functions in order to keep code DRY.

Tracks (Ruby) ⇒ [github](#)

- Created a web-application framework that responds to incoming HTTP requests.
- Used a router to filter requests and map them to appropriate controller.
- Leveraged controllers to place methods that generate responses to HTTP requests.

SKILLS

React	Redux	JavaScript	ES6 / ECMA2015	Ruby on Rails	CSS3
HTML5	SASS	SQL	Git	NPM	Webpack
Babel	Jasmine	RSpec	Capybara	RestAPIs	MVC Framework
Linux	Command-line	Balsamiq	BEM	Atomic Design Theory	Responsive Design (Flexbox, CSS-Grid)

EXPERIENCE

DACA Time — Software Developer 2017

- Contributed to non-profit that facilitates the application process for people eligible for Deferred Action for Childhood Arrivals (DACA)
- Instituted a functioning platform to provide for translation of the application's content.
